- ❖ Trauma
- ❖ Emotional Regulation
- ❖ Behavioural Regulation
- ❖ Relation Disorders

Our Assessments can be done on school site or at our clinic

Spot Chat

Free Speech Pathology and Occupational Therapy screeners

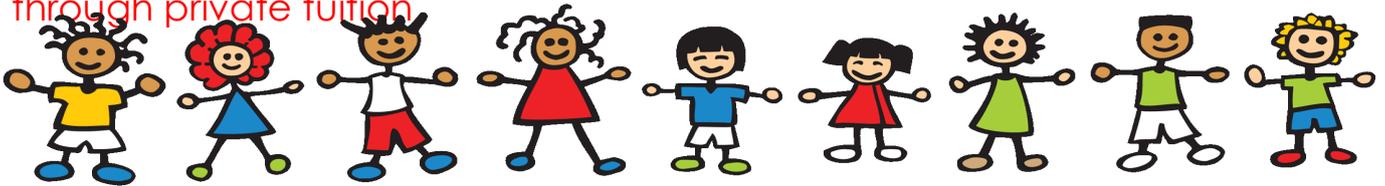

These screening services are run one day each month at our clinic. These services are provided so that parents can meet with a clinician who will informally assess their child to determine if their child is functioning age appropriately or if further assessments or therapy is needed.

Workshops

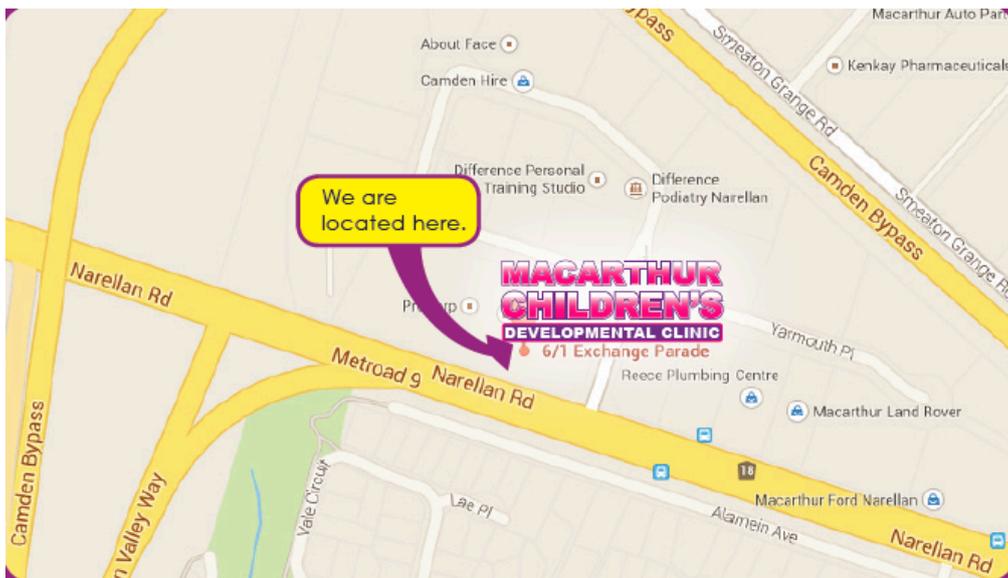

Workshops are fun, interactive and informative. Teachers are loaded with information and practical strategies to use in the classroom. Our consultants have a range of topics that they are able to discuss and are also happy to plan a workshop around a topic of need at your specific school. Our consultants can conduct staff development days for your team, speak at your staff meetings or during school hours.

Therapy at school

We know how busy families are and for this reason, Macarthur CDC offers therapy session at school. This allows families freedom in the afternoon and children receive therapy earlier in the day when they are fresh and keen to learn. It is a great way for our clinicians to collaborate with class teachers and to make their therapy tie in with their learning experiences at school. These services can be accessed by the school or by parents through private tuition.
